Art Unit: 1714

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 6-15, 18, 20, 26-28, 31-35 and 38 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the adhesives of some examples, does not reasonably provide enablement for broadly claimed polyurea-based polymer. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims.

The instant specification teaches that the polymer comprising the recited repeating units of Formula I is "a heat-activatable adhesive" as well as PSA. Thus, the recited the polymer comprising the repeating units of Formula I as PSA is broader than the actual invention.

Claims 1-3, 6-15, 18, 20, 26-28, 31-35 and 38 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant teaches that the polymer comprising the recited repeating units of Formula I is "a heat-activatable adhesive" as well as PSA in the specification. However,

Art Unit: 1714

applicant failed to describe adequately when the polymer comprising the recited repeating units of Formula I is a PSA, not a heat-activatable adhesive. Undue experimentation is needed one skill in the art absent particular parameters such as values for a and/or m or molecular weight for said polymer.

Applicant's asserts that the polyurea copolymer of Hassel et al and Starzewski et al is a heat-activatable adhesive, not a PSA, and thus there must be critical parameters for said polyurea copolymer in order to become a PSA, not a heat-activatable adhesive.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3, 6-15, 18, 20, 26-28, 31-35 and 38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited "based" in "polyurea-based polymer" is indefinite since said "based" encompasses any derivative thereof and since the claim recites "the copolymer is comprises" which permits any modification.

The recited "a heat-activatable adhesive" of claim 20 improperly broadens the scope of claim 1 wherein a PSA is recited. The claim has not been cancelled contrary to applicant's statement.
